Get even more from your current data storage with a more evolved enterprise solution.

Whether you're focused on retail or commercial banking, wealth management, or securities, your organization handles staggering volumes of data. Yet, as volumes of data continue to grow, IT budgets have been reduced, financial transaction settlement windows are contracting, and compliance-driven requirements are becoming more complex. You need a tailored solution that can address the problem without burdening your already-constrained IT budgets and resources.

PKZIP FOR FILE MANAGEMENT OPTIMIZATION IN BANKING & FINANCIAL SERVICES

PKZIP®

Make your data smaller *and* move it faster.

PKZIP continues to be the gold standard in data compression and file management, evolving as your needs have changed, compressing and extracting files to greatly reduce required storage space and transmission times. And, using the .ZIP standard, you can easily exchange data across all major enterprise computing platforms more efficiently and effectively.

FEATURES & BENEFITS

Meet tight processing windows.
Reduce transmission times up to 40% or more to minimize the risk of missing processing windows.

Eliminate process and technology changes.
PKZIP works as a complementary solution, working with, and enhancing, existing installed technologies.

Maximize existing storage resources.
Reduce file size up to 98%. Smaller file size means fewer storage devices.

Reduce IT infrastructure costs.
Compress files to conserve substantial storage space up to 98%.

Your unique challenges	Our unique solutions
Amounts of data keep growing. But the batch processing windows, such as those dictated by ACH, continue to contract. Data security compliance requirements add to the processing burden.	PKZIP reduces transmission times up to 40% or more. More data can be managed in the same amount of time. Complete batch processing faster and avoid additional bandwidth costs.
Archiving databases used for nightly back-ups and data retention requires huge amounts of storage. And, exponential growth of financial data means increased cost for data storage devices.	PKZIP reduces file size and conserves storage space up to 98%. Maximizing existing storage space requires fewer storage devices, allowing you to drive profits by reducing spending on data center resources.
Increasing requirements for data exchange across multiple computing platforms results in increasing production support costs.	PKZIP works across all major enterprise computing platforms, consolidating file transfers and insulating platform data exchanges. Reduce overall production support costs.
